

Lay-Flat[®] Velvet Hi-Tac Matte Film

For creating flat, durable laminated digital prints with a soft feel

Lay-Flat Velvet Hi-Tac Matte film is the ideal solution for single-sided lamination of output from digital printing systems. Because it is primarily designed for this application, Lay-Flat film ensures the finished product will *lay flat*. The Hi-Tac adhesive provides excellent adhesion to toner-based prints.

In addition, this nylon film offers a scuff-resistant surface combined with a very soft feel that protects and enhances the look of books, packages and other printed materials.

Features and Benefits

Lamination of toner-based prints is not a problem with Lay-Flat Velvet Hi-Tac Matte films. Even prints with high levels of fuser oil and other toners will create a strong chemical bond with the film's Hi-Tac adhesive. Sheets can be laminated immediately after printing, allowing for faster turnaround times.

Most prints laminated on a single side have a tendency to curl when humidity levels are high. Patented Lay-Flat film employs a substrate that adapts to changes in relative humidity, resulting in beautifully finished prints that stay flat.

Lay-Flat Velvet Hi-Tac Matte film provides a durable,

scuff-resistant surface for protecting book covers, dust jackets, folding carton packaging and more. The result is increased sales and higher realized margins for publishers.

Lay-Flat Velvet Hi-Tac Matte film has a matte finish that minimizes glare while preserving image color. The matte finish and soft feel will attract the buyers' attention and increase the perceived value of the product.

This film accepts UV spot coating, foil stamping, and animal- and synthetic-based glues.

Stock Sizes

Available in all sizes. Contact your local Cosmo Films North America representative.

Product Description

Description:	Nylon substrate with anti-curl properties and a scuff-resistant topcoat, combined with a soft feel and a Hi-Tac adhesive for polyester-based toner prints containing fuser oil and other dry toners
Finish:	Matte
Gauge:	1.4 mil (35 micron)
Film Wrap:	Film is wound adhesive in (PI) on all core sizes
Temperature Range:	270°–285°F (132°–140°C)

Market Applications

> Book covers > Dust jackets > Pocket folders > Postcards > Gift bags > Brochures > Presentation covers > Packaging

Professional Solutions

Lay-Flat Velvet Hi-Tac Matte film is recommended for use on output from digital presses and printers including Canon imagePress, Kodak NexPress, Xerox iGen 3 and iGen 4, as well as most Docucolor systems. Consult our printer compatibility chart for other print engines. Run on the Cosmo Films 6300, 7580 or other commercial laminators for fast, trouble-free, single-sided lamination.
